

[DFW - Danny] Settle to Carlisle - Electric 3.0 – 2026

Also available on Steam Workshop

This route upgrade is based on Danny's Settle - Carlisle Electric upgrade (Steam Workshop). Thanks to Danny's permission i refined the route a bit. Please don't expect graphical fireworks. This was the situation a good four years ago and nothing has changed significantly since then.

This is a fictitious extension of the original Settle to Carlisle line. It is set in the year 2026 - so it is purely fictional. A large part of the British railway network has been electrified - including the route to Leeds.

This means that a large part of the freight traffic towards Leeds will also be diverted onto this route.

Northern organizes local passenger transport - Freight transport is shared by several companies (there may be some that no longer exist in reality). Intercity service from Carlisle to Leeds are operated by Locomotive Services Limited.

Changes:

- unguarded level crossings removed
 - added restricted level crossing
 - additional portals added
- additional block sections added
 - Objects removed/added
 - Line speed changed
 - Signals (3 aspects) added
- AWS ramps and general route signs added
 - Stations modernised
 - New track
- Platforms in Settle and Appleby extended/renewed
- known problem with sunken passengers on platforms in Settle and Appleby could not be solved
- not compatible with previous scenarios (Settle - Carlisle or Dannys Settle - Carlisle Electric – Steam Workshop)
