

Steamtrains Unlimited

Scenario's for Romantic Railroads

Silver Class

1971 - The local to Finnentrop

Drive the 03 111 with a local train

A Class V200 broke-down!

Steamtrains Unlimited

The Local to Finnentrop

This amazing scenario is created in cooperation with BeeKay. Just before you start up the scenario, make shure the “Automatic Fireman” is disabled in the game setting in order to improve the game experiance, firing and driving skills.

This scenario is based at the Ruhr-Sieg Line mainly between Hagen and Siegen just south of the Ruhr Area and not that far away from the famous DGEG museum near Bochum-Dalhausen.

The local to Finnentrop is actually based at the enviroment of the German Federal State Railway (DB) basics in the period of the steam era, The steam locomotive still in service but many were already put at Non-Active at that moment.

A class V200 is stucked with an engine failure at the platform at Siegen is already uncoupled and pulled away by a shunter engine class 323 to a siding. Your task now is to take over that train with steam locomotive class 03 (03 111) which already puts in front of the train by the shunting and workshop crew. The only thing you have to do is to clean and regain fire and pressure using the tools of the fireman.

The Ruhr-Sieg DLC as it comes is based at the original route between these German cities. The former workshops and steam locomotive sheds such as Hagen-Eckesey, Hagen-Vorhalle, Hagen-Hbf and Finnentrop Bw are unfortunately not included in the DLC.

With buildings-, loft, clutters and car assets included in the RRR packages the route is “refurnished” as far as possible with waterloaders, coal depots, oil depots and more at almost every station along te route. Modern cars and modern areas are covered and stored away underneith RRR buildings to intend to recreate the ambient of the steam era from the 70’s. The lack of semaphore signals is covered by the signal as they came with de original DLC. These type of German main signals and distance/approach signals are quite suitable and adaptable to the steam era in the 70’s as well.

Firing and driving a steam locomotive requires a skilled driver and the complete attention and vigilance during running. Driving the scenario in Expert Mode requires knowledge and wisdom about the technical aspects.

You can refer the online guide at <http://engine-driver.com/workshop>

“Driving the Steam Locomotive and the technical aspects.”

Scenario classification

To achieve the full advantage of the packages you need to know the classification and download and install the rolling stock and engines as mentioned on the last page of this folder. The classification method is introduced by SteamtrainsUnlimited.

There are 6 different types of classifications:

1 Chrome: *Freeware*

This scenario class only contains all default rolling stock as they came with the original DLC. There are no other assets needed to drive a scenario in this range.

2 Bronze: *Freeware*

This scenario class contains the DLC original rolling stock and all freeware rolling stock according to the steam era in Germany.

3 Silver: *Freeware*

This class is equal to the "Silver" class but in addition a small range of payware is included according to the steam era.

4 Sapphire € 2,49

This class is equal to the "Silver" class but with a wide and complete range of additional payware rolling stock range according to the steam era.

5 Gold: € 2,99

This class is equal to "Silver" but rolling stock and of the Expert Line are required which has been distributed by Just Trains or Virtual Railroad.

6 Platinum: € 3,49

This class is equal to "Gold" class but additionally you need more DLC routes in order to have the rolling stock and/or clutter/buildings which are used in this scenario according to the steam era.

Steamtrains Unlimited

Where to download the freeware and payware add-on's?

Engine-Driver.com

German Freight trains in the 70's.

virtual-railroads.de

All German locomotives which has driven in the steam era in Germany.

Just Trains

All Romantic Railroads releases of rolling stock and locomotives that has ran at DRG/DR/DB tracks untill the end of the steam era.

Halycon

The class Baureihe E94 and VT08 from RRR / BeeKay.

Dutch-Classics

Plan D Coach set from the Dutch Federal railway (NS) - package set number 7.

Needed Freeware :

All European freeware trains/rolling stock including the repaints concerning the steam era of Germany.

You can find this add-on's at:

rail-sim.de - railsim-fr.com - klemund.de - dutchrail.nl (guterwagen: hbis) - larimessaferroviaria.net - railworks-austria.at and others

Quick Install method of more packages together:

Some knowledge of the RS/TS Package Manager is advisable.

- 1 Execute self installers as they come along with packages.
- 2 Unpack Non executable self Installer packages by using WinZip or 7zip into your temporary map .
- 3 Create a 2nd temporary map (and name it: "su-scenario" for example)
- 4 Copy All unpacked RWP / RPK files into the 2nd temporary map by using the shortcuts: Ctrl-C and Ctrl-V if desired.
- 5 Then open the Package Manager from RS/TS and click Install. This will open up the Load-package-screen. Then find and select all the RWP/ RPK files which you just had copied into the 2nd temporary map by using Ctrl-A
- 6 In the Package Manager pop-up-screen click open and all the packages will install right away. After installing click the refresh button and check out the list of installed packages. If done you are ready to launch RS/TS
- 7 Now launch RS/T and select the desired scenario. All aboard and go!!!

Other scenarios from Steamtrains Unlimited are created and developed for:
Westen Lines of Scotland, The Port Road at engine-driver.com/workshop:

"The Local to Kirchudbright - The Northern Irishman Sleeper Express -
The Northern Irishman Sleeper Express with the Flying Scotsman - The Northern Irishman Stranrear - Carlisle (London) the reverse ride - Border Raider Express"

R.C. de Visser, Steamtrains Unlimited - Rotterdam - The Netherlands.
