

RSSLO Mittenwald, EnnstalBahn, Südbahn: Bruck an der Mur – Graz – Maribor and Tirol Austria – Brennerbahn/UnterinntalBahn patch

The patch focuses on Mittenwald, EnnstalBahn, Südbahn: Bruck an der Mur – Graz – Maribor Route and Tirol Austria – Brennerbahn/UnterinntalBahn. Due to the way RSSLO build routes, IT WILL IMPACT SemmeringBahn and TauernBahn. This patch is designed to work perfectly with RSSLO SemmeringBahn and TauernBahn patch. I strongly advice to install both (in any order).

What does this patch do?

- Changes the TimeOfDay to have the nicer Kuju clouds
- Changes the tracks to DB tracks
- Changes color saturation for some plants
- Changes some terrains and some procedural textures
- Replace 99% of the ugly RSSLO 3D grass with my Koblenz Trier grass
- Designed for the following routes:
 - RSSLO Tirol Austria – Brennerbahn/UnterinntalBahn Route - RSSLO TauernBahn
 - RSSLO Südbahn: Bruck an der Mur – Graz – Maribor Route
 - RSSLO Mittenwaldbahn Route
 - RSSLO EnnstalBahn Route

Installation

- First, make a backup of the Assets\RSSLO_Routes folder
- Unpack the 7z files
- Use utilities to install the rwp or unpack the rwp and past it in your game folder
- Overwrite older files

Optional

There is a Kuju.rwp file which is optional because changing some stuff in Kuju affect any Kuju based route. This change the more washed out and/or flashy textures to a more homogenous set of textures. Now Kuju.rwp is updated to have a very limited impact on other routes. Using it will remove the flashy fields from RSSLO routes.

Uninstallation

Restore a backup of the routes Assets and Content

Bugs

None

Bugs fix

Version 1b fix the kuju.rwp with 0 Kb files

Version 1.1 fix DB track
