

IC119 Lindau HBF to St Anton Am Arlberg:

This scenario is based on the real timetables of IC119 on the 23/08/2013.
This train drives from Münster to Innsbruck mostly with DB IC coaches.
The traction between Ulm and Lindau is mostly provided by two BR218.

All passenger trains you will meet are following there real timetable.
The only difference to reality is the stock used, this because of the shortage in Austrian stock like Talent units etc...

The scenario will start with your BR1016 in the siding in Lindau.
Prepare your locomotive and drive past the second shunting signal (Y2), change ends there and drive up to platform 3 where you need to couple the coaches if the IC train.
Then open the doors and change ends again and prepare yourself for the ride.
Watch the signals on route especially on the Arlbergbahn because there is one freight train descending and one Railjet.

At the bottom of the readme you will find the real timetable for the hole journey of IC119.

I hope you like it.

Best regards
Jorik

Installation:

You have two version of the scenario, the first one where you will need the

RailTraction BR218 and the other one where you don't need them.
Refer to the name of the file.

Other addons needed:

-First the Justtrains 3 Country Corner Route

<http://justtrains.net/product/three-country-corner-route-download>

-The HRQ Taurus package

<http://trainsimcontents.blogspot.de/>

-(Optional) Railtrraction BR218-400
