# ICMm Soundmod

*for Train Simulator 2020 and up*

Please turn ON 'EFX' in the Train Simulator Option under 'Audio'

Otherwise this soundmod won't have the intended effect and will sound unrealistic

This Mod changes the entire sound within Train Simulator. Almost everything has been redone and modified. In addition the driving physics have been overhauled including the removal of the camera shaking when braking or accelerating

A preview video is [here](#)

You will need the following for this to work

[ChrisTrains NS ICMm](#)

Sounds have been taken almost entirely from the YouTube Channel [4K Train Driver's POV Dutch Railways](#)

Additional sounds were recorded at Groningen railway station

## Installation

1. Install the ICMm DLC by ChrisTrains
2. Go to your Train Simulator main folder (usually C:\Program Files (x86)\Steam\steamapps\common\RailWorks). There is a executable program called Utilities.exe. Under the section *Package Manager* you can install the \*.rwp file included in the download.

If there is a problem with installing, you can try installing it manually:

1. Open the \*.rwp with WinRAR or 7Zip. You'll find a folder called 'Assets'.
2. Copy this folder into you Train Simulator main directory and **overwrite** everything when asked
