

[Seungwan] IC 2044 Dresden – Koln (2021)

Service Introduction

Bombardier Twindexx IC2 set is a familiar sight especially in Sachsen region that has becoming their stomping ground as of late. These sets started their service in December 2015 and connects cities like Dresden, Leipzig, Koln, Rostock, and other cities within the region. In Dresden Hbf, there are quite a few IC2 departures starting from the earliest service (IC 2044) which is a Monday to Friday only service for the early morning commuters. The train departs Dresden at 5.23 a.m and will arrive in Koln at 12.46 p.m. You will drive this exact service in this scenario. Good luck!

Important Notes for this scenario:

1. Long distance, Regional, and S-bahn service are according to the recent timetable year 2021. Train configurations are made as realistic as possible for the year.
2. Freight timetables are fictional as I couldn't find any timetable on the internet but the train configurations will be as realistic as possible for this particular line.
3. The scenario includes on board announcements from **Bennito** to add to the realism
4. The autofill method to insert the train data is not fully functional because of the use of Twindexx IC2 coaches. **Please insert the train data manually.**
5. This is a relatively quick scenario with adverse weather to make it more immersive and atmospheric feel.
6. It's an early morning scenario so you won't see many AIs along the way as the rush hour is just about to start. If you don't like having less number of AIs then I'm afraid this is not the scenario for you.

Scenario Requirements

Below are the lists of Payware and Freeware requirements for the scenario to work at its full potential. Each requirements have their link to make it easier for you to navigate and search for them. Remember, If you're swapping locos or consists, I'm not responsible for any error occurred in the scenario.

Payware Requirements

1. [DTG Dresden Riesa](#)
2. [AP Weather Enhancement](#)
3. [3DZug KI Pack](#)
4. [TTB Scenario Pack 1,2 and 3](#)
5. [TTB 151 Plus Packs](#)
6. [TTB 143 Plus Packs](#)
7. [NiclasL BR 146](#)
8. [Influenzo VR DB BR 146](#)
9. [Railtraction IC2](#)
10. [VR DB BR 151 Vrot](#)
11. [VR DB BR 185 Vrot](#)

Freeware Requirements

1. [DB BR 146 IC2 Reskin by Elena](#)
2. [3DZug sgnss Repaint Pack by alex95 and RDF](#)
3. [DB BR 146 Sbahn Dresden Repaint Pack by SteuerwagenSchmiede](#)
4. [DB BR 151 Hector Rail Repaint](#)

Thank you for downloading this scenario and I hope you enjoy it as much as I creating it. If you found any errors please do not hesitate to leave your comment on my profile at railsim.de or the scenario comment section. Please do leave a positive feedback or constructive criticism for the sake of my improvements on creating future scenarios.
