

[ENG] Read me | 3DZUG ICE1 Soundmod v3

Changelog

- New voice outputs
- New bogie and track sounds
- Reworked cab control sounds
- Separate traction motor blower sounds for IGBT/GTO versions
- 14 new gearbox samples
 - Gearbox backlash within the fundamental frequency clocking range (above 186 kph)
- New traction inverter sounds
 - IGBT: 9 Samples for asynchronous modulation, new samples for synchronous modulation
 - GTO: 15 new samples for asynchronous scale, realistic implementation of synchronous modulation (9 to 3-fold clocking, edge pulse modulation and fundamental frequency clocking) above 51.5 kph
 - Samples for Four-Quadrant converter/transformer of the GTO version
- Adjusted exterior running sounds
- Adjusted interior running sounds
- New auxiliary power converter samples
- New horn samples
- PreLoads for GTO and IGBT versions

Installation

1. Install the IGBT and GTO version of [Linus' Soundmod](#) (in the „Documents“ tab)
2. [Optional] Create a backup of
`...\Railworks\Assets\3DZUG\3dz_ICE1\PreLoads,`
`...\Railworks\Assets\3DZUG\3dz_ICE1\RailVehicles\electric`
and `...\Railworks\Assets\3DZUG\3dz_ICE1\Audio`
3. Extract the Assets folder provided with this .zip into your main Railworks directory
4. Clear the cache

EFX has to be enabled in order for this soundset to function as intended!

Credits:

Linus F. – Original version of this soundmod

Maik R. – Supply of high-quality recordings of BR 401 units

Cirno – Supply of bogie and tracks sound as well as auxiliary power converter samples

Maggus – Horn sounds (interior)

eisbaer6 – Extensive testing of this soundmod

Many thanks to everyone involved!
