# Train Simulator 2019

# Class 378

# Soundpack

**For this soundpack to work you will require the base game Train Simulator 2019 and the following DLC**

**[DTG Class 378 Capitalstar](#)**

**[Armstrong Powerhouse Class 375/377 Soundpack](#)**

## Disclaimer

I am not affiliated with TfL even though this manual might look like that. I am just a guy who found the pdf on the corporate design standards online.

## What this soundpack offers

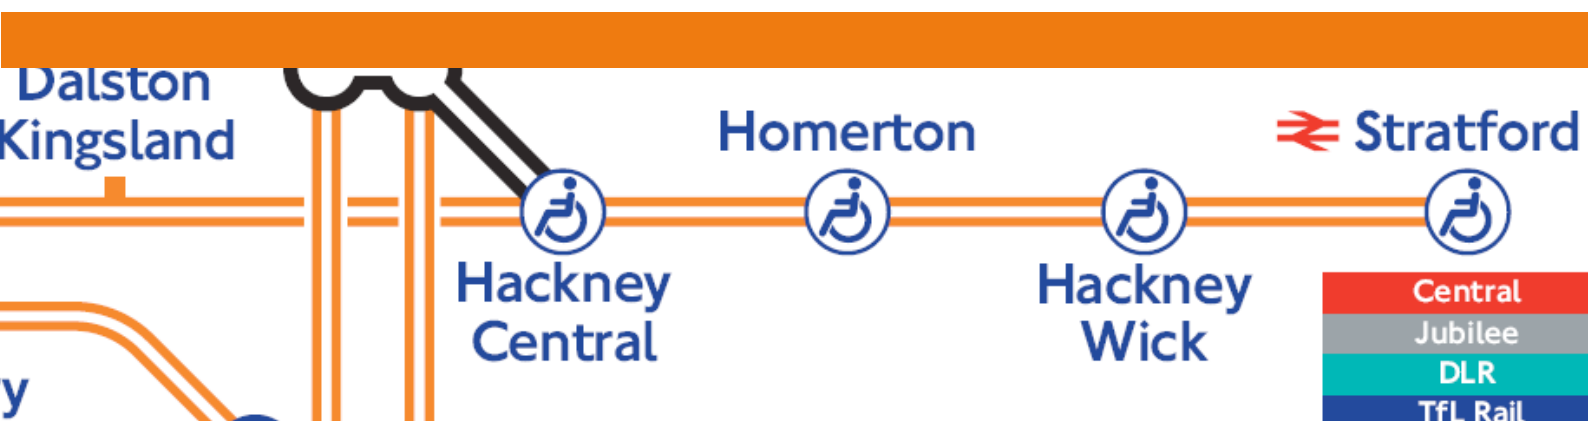

- New and improved sounds for the class 378 both inside and outside
- Improved physics when accelerating and braking
- A scenario which features real announcements from the Overground

## Please note

- In Train Simulator, go to Settings > Audio and turn on EFX otherwise this soundpack is pointless
- When you install this, the Southern Class 377 will also get new 'Joint' (sound when driving over railway joints) and 'Flange' (sounds when driving into a curve) sounds
- The passenger view does not feature a cab occlusion meaning that it will sound like being outside when in passenger view

## Installation

1. Install the Class 378 DLC via Steam
2. Install the Armstrong Powerhouse Class 375/377 Soundpack
3. In the downloaded file, you will find a \*.rwp file which needs to be installed with Utilities.exe found in the Train Simulator main directory (steam/steamapps/common/railworks).

# Scenario

A scenario is included in this pack which sees you driving from Clapham Junction to Stratford according to a real world timetable with AI Trains who also drive to the latest timetables.

This scenario features real-world announcements from the London Overground. Please note that you will only hear the announcements when approaching a station and not when opening doors at a station. This is due to limitations by the simulator.

To be able to drive this scenario, you will need the following DLC:

[DTG North London & Goblin Lines](#)

[DTG Class 378 Capitalstar](#)

[DTG GEM London - Ipswich](#)

[DTG Portsmouth Direct Line](#)

[DTG London to Brighton](#)
